The growth in financial instruments during the last decade has resulted in a significant development of econometric methods (financial econometrics) applied to financial data. The objective of our Multivariate Garch Models for Risk Management course is to provide participants with a comprehensive overview of the principal methodologies, both theoretical and applied, for the analysis of risk in financial markets. To this end, the course focuses on the modelling and forecasting of financial time series and in particular modelling returns and volatility in asset returns; the modelling of cross market correlations, volatility spill-overs and contagion in financial asset markets; and the implementation of both factor models and principal components analysis for the identification of specific asset, country and global factors. The course concludes with an analysis of the available risk management tools/measures widely adopted in academia and the financial. During the course of the three days, a number of alternative GARCH models, models of conditional correlations, and value-at-risk models will be reviewed.

In common with TStat’s training philosophy, throughout the course the theoretical sessions are reinforced by case study examples, in which the course tutor discusses current research issues, highlighting potential pitfalls and the advantages of individual techniques. The intuition behind the choice and implementation of a specific technique is of the utmost importance. In this manner, course leaders are able to bridge the “often difficult” gap between abstract theoretical methodologies, and the practical issues one encounters when dealing with real data. At the end of the course, participants are expected to be able to autonomously implement the theories and methodologies discussed in the course.

The course is of particular interest to: i) Master and Ph.D. Students and researchers in public and private research centres, and ii) professionals employed in risk management in the following sectors: asset management, exchange rate and market risk analysis, front office and research in investment banking and insurance, needing to acquire the necessary econometric/statistical toolset to independently conduct an empirical analysis of financial risk.

Participants are required to have a basic knowledge of either econometrics or statistics. Previous experience with statistical software will facilitate the practical sessions.
SECTIONS III / IV: MULTIVARIATE VOLATILITY
(MGARCH) MODELS, CONDITIONAL CORRELATION MODELS AND CONTAGION

1. Modelling cross-markets correlations and testing for volatility spillovers with:
   • Diagonal VECH (DVECH)
   • Constant Conditional Correlation (CCC)
   • Dynamic Conditional Correlation (DCC) models.

SESSION V: FACTOR MODELS

1. Static and dynamic factors, factor estimation, determining the number of factors, nonstationary factor models.

2. Identifying global, asset related and country specific factors in data with a large number of assets with principal component analysis and static and dynamic factor models.

3. Applications of factor analysis to (bond and asset) portfolio management, stock liquidity and its determinants.

SESSION VI: RISK MANAGEMENT TOOLS

1. Portfolio Value-at-Risk (VaR).
2. Parametric VaR.
3. Historical simulation VaR.
4. Monte Carlo VaR.
5. Expected Shortfall (ES) and Tail Risk (TR).
7. Unconditional coverage.
8. Independence.
10. Duration based tests of independence.

USEFUL TEXTS

DATE AND LOCATION

The course will be held in Singapore on the 11th-13th May 2020.

REGISTRATION FEES

Students*: € 810.00
University: € 1350.00
Non-Profit/Public Research Centres: € 1680.00
Commercial: € 1980.00

*To be eligible for student prices, participants must provide proof of their full-time student status for the current academic year.

Fees are subject to VAT (applied at the current Italian rate of 22%). Under current EU fiscal regulations, VAT will not however applied to companies, Institutions or Universities providing a valid tax registration number.

Please note that a non-refundable deposit of €100.00 for students and €200.00 for Academic, Non-Profit/Public Research Centres and Commercial participants, is required to secure a place and is payable upon registration. The number of participants is limited to 12. Places will be allocated on a first come, first serve basis.

Course fees cover: teaching materials (handouts, Stata do-files and datasets to use during the course), a temporary licence of Stata valid for 30 days from the beginning of the workshop, light lunch and coffee breaks.

To maximize the usefulness of this workshop, we strongly recommend that participants bring their own laptops with them, to enable them to actively participate in the empirical sessions.

Individuals interested in attending this workshop must return their completed registration forms by e-mail to TStat by the 11th April 2020 (training@tstat.eu).

Further details regarding our registration procedures, including our commercial terms and conditions, can be found at https://www.tstattraining.eu/training/financial-risk-management-sing/.
