ANALYSING MICRO DATA IN STATA

13th-14th-15th and 20th-21st December 2021

TStat's *Analysing Micro Data in Stata* course offers participants a comprehensive introduction to the principle methodologies used in the analysis of micro data. Micro data, data which contains information at the level of a specific unit (such as individuals, firms or entities), has by its very nature become an increasingly important source of information offering researchers and policy makers an effective *tool* with which to obtain a more in-depth understanding of an array of political, socio-economic and public health phenomena. As such the collection and subsequent analysis of micro data over recent years has proved to be the key to policy formulation, the targeting of interventions and the subsequent monitoring and measurement of the impact of such interventions and policies. Whilst these techniques have been traditionally more applied in the field of economics, the increasing availability of micro data has over recent years resulted in a steady increase in the analysis of micro data by researchers working in Political and Social Sciences, Biostatistics, Epidemiology and Public health.

TStat's introduction to micro data analysis course focuses from both a theoretical and applied point of view, on the following methodologies: count models, binary dependent variable models, multinomial models, Tobit and Interval Regression models, models with treatment variables and models with Sample Selection. The concluding session focuses on the Control Function approach for the estimation of non-linear models with endogenous continuous variables.

In common with TStat's training philosophy, each individual session is composed of both a theoretical component (in which the techniques and underlying principles behind them are explained), and an applied (hands-on) segment, during which participants have the opportunity to implement the techniques using real data under the watchful eye of the course tutor. Throughout the course, theoretical sessions are reinforced by case study examples, in which the course tutor discusses and highlights potential pitfalls and the advantages of individual techniques. The intuition behind the choice and implementation of a specific technique is of the utmost importance. In this manner, the course leader is able to bridge the "often difficult" gap between abstract theoretical methodologies, and the practical issues one encounters when dealing with real data. At the end of the course, participants are expected to be able to autonomously implement the theories and methodologies discussed during the course.

COURSE CODE

D-EF13-A-OL

DATE AND LOCATION

Due to the ongoing COVID-19 situation, the 2021 edition of this Training Course will be offered **ONLINE**. To facilitate the transition to an online format, the course programme has been transformed into 5 modules running from 10.00 am to 1.30 pm Central European Time (CET) on the 13th-14th-15th and the 20th-21st of December.

A 45 minutes informal evening study group session will also be scheduled, during which participants are encouraged to discuss further issues arising from either the arguments addressed or practical sessions undertaken. The course leader will also be available during this session to offer feedback and guidance on how to deal with specific research issues.

TARGET AUDIENCE

Researchers and professionals working in biostatistics, economics, epidemiology, finance, psychology, social and political sciences needing to acquire the necessary statistical requisites required to independently conduct empirical analysis using micro data.

ANALYSING MICRO DATA IN STATA

PREREQUISITES

It is assumed that course participants have at some point followed a basic course in econometrics or statistics and have a basic knowledge of linear-regression methods. Previous exposure to Stata or other statistical software packages would also be an advantage.

PROGRAM

SESSION I: COUNT MODELS

1. Count Model Estimators in Stata: The Poisson Model
 - Non-Linear Least Squares and GMM Estimators, Maximum Likelihood Estimators in Stata: **nl**, **gmm**, **poisson**
 - Models with endogenous regressors: **gmm** and **ivpoisson**
2. Estimation and Specification tests in the presence of *overdispersion*: the *Generalized Negative Binomial Model*: **nbreg**, **gnbreg**
3. Estimation and interpretation of marginal effects using the Stata post estimation command **margins**

SESSION II: DISCRETE DEPENDENT VARIABLE MODELS

1. Estimating linear models with binary dependent variables – Logit, Probit and the Linear Probability Model: **probit**, **logit**, **regress**
2. The Heteroskedastic Probit Model and tests of heteroskedasticity: **hetprobit**
3. Measures of Goodness of Fit and Specification Tests: **tabulate**, **estat classification**, **estat gof**
4. Independent Latent Heterogeneity in Probit Models
5. Estimating marginal effects: **margins**
6. Numerical problems with Logit and Probit

SESSION III: PROBIT MODELS WITH ENDOGENOUS REGRESSORS

1. The *Control Function* (CF) in the presence of continuous endogenous regressors
2. Testing for exogeneity in the CF framework
3. *Bootstrap* standard error estimation in the CF approach
4. Maximum likelihood estimation in the presence of continuous endogenous regressors: **ivprobit**
5. The multivariate recursive Probit estimator as a solution to the problem of the presence of binary endogenous regressors: **biprobit**, **mvprobit**, **cmp**
6. Measures of Goodness of Fit: **tabulate**, **estat classification**, **estat correlation**
7. Estimating marginal effects: **margins**

SESSION IV: MULTINOMIAL MODELS

1. Ordered categorical variable models (the Ordered Probit and Ordered Logit Estimators): **oprobit** and **ologit**
2. The Heteroskedastic Probit Model and tests of heteroskedasticity: **hetoprobit**
3. Models with categorical (but unordered) variables - Multinomial Logit and Multinomial Probit estimators: **mlogit**, **mprobit**
4. MacFadden's Choice Model - categorical variable models with alternative specific regressors: **cmclogit**, **cmcprobit**
5. Measures of Goodness of Fit and Specification Tests
6. Estimation and interpretation of marginal effects using the Stata post estimation command **margins**

SESSION V: THE TOBIT MODEL, INTERVAL REGRESSION E SAMPLE SELECTION

1. The Tobit Model - ML and Two-Step Least Squares: **tobit**, **heckman**
2. The *Control Function* (CF) approach in the presence of continuous endogenous regressors, exogeneity tests and *Bootstrap standard errors*
3. The Maximum Likelihood estimator for Tobit models with endogenous regressors: **ivtobit**
4. Interval Regression: a generalization of the Tobit Model: **intreg**

ANALYSING MICRO DATA IN STATA

5. Estimators for Sample Selection Models: *heckman*
6. Estimation and interpretation of marginal effects using the Stata post estimation command *margins*

REGISTRATION FEES

Full-time Students*: € 890.00
PhD Students: € 1135.00
Academic: € 1260.00
Commercial: € 1685.00

*To be eligible for student prices, participants must provide proof of their **full-time** student status for the current academic year. Our standard policy is to provide all full-time students, be they Undergraduates or Masters students, access to student participation rates. Part-time master and doctoral students who are also currently employed will however, be allocated academic status.

Fees are subject to VAT (applied at the current Italian rate of 22%). Under current EU fiscal regulations, VAT will not however applied to companies, Institutions or Universities providing a valid tax registration number.

The number of participants is limited to 8. Places will be allocated on a first come, first serve basis. The course will only be confirmed when at least 5 people have enrolled.

Course fees cover: teaching materials (handouts, Stata *do files* and datasets to used during the course), a temporary licence of Stata valid for 30 days from the beginning of the course.

Individuals interested in attending this workshop must return their completed registration forms by email (training@tstat.eu) to TStat by the **3rd December 2021**.

Further details regarding our registration procedures, including our commercial terms and conditions, can be found at <https://www.tstattraining.eu/training/analysing-micro-data-stata-a-ol/>
